

# Cooper Test

## Introduction

The objective of an evaluation test is to monitor the development of IDP Athletes. The test will be used on a regular basis to:

- Predict future performance
- Indicate weaknesses
- Measure improvement
- Enable coaches to assess the success of our training program
- Place each athlete in the appropriate training group
- Motivate each athlete

## Objective

Monitor the development of each athlete's general endurance.

## Required Resources

This test will require:

- 400 meters track - marked every 100m
- Stop Watch
- Couple of assistants

## How it works

The test comprises of seeing how far an athlete can run/walk in twelve minutes. Assistants should record the total distance covered to the nearest 100 meters.

## Analysis

Analysis of the results, distance covered, is by comparing it with the results of previous tests. The expectation is that, with an appropriate training between each test, the analysis will indicate an improvement in each athlete's general endurance.

**The following table rates performance for young athletes.**

Age	Excellent	Above Average	Average	Below Average	Poor
